

Overland Cart November 1st Pricing Update

Overland Carts have been improving since their initial release in 2008. We've improved the chassis strength, throttle, usability and added new features. As we look to the next improvement, we are looking at the most common question we have received over the last 8 years: **How long does the battery last?** This was especially true with the carts that come with the standard 12A, 24V battery pack. In an effort to improve the overall Overland Cart experience we **are introducing 21A, 24V battery packs as STANDARD on all carts.** We have sourced one of the best rechargeable sealed lead acid batteries on the market. This will affect all the **R-series carts and the C27 and C44 models.** Also included in the battery upgrade is a charger upgrade. The new charger is a 5A charger capable of charging the batteries quickly and safely using a 4 part "smart charge". **There is a small price increase with this, taking the R-Series and C-27/C-44 retail prices up \$100.00.** To make the pricing more transparent we have made the 27 inch chassis models and 44 inch chassis models the same price.
